ICELAND SUSTAINABLE FISHERIES

A client group for MSC certified fisheries

Kristinn Hjalmarsson, verkefnastjóri

Fiskurinn frá Íslandi er sjálfbær!

1. Hver er eftirspurnin eftir sjálfbært vottuðum sjávarafurðum?
2. Hvar erum við stödd á Íslandi með sjálfbæra vottun sjávarafurða?
3. Hvernig getum við haft áhrif á sjálfbærni?
4. Hvað af sjálfbærninni er utan okkar seilingar?
5. Er sjálfbærni dægurfluga?

Hver er eftirspurnin...

... eftir sjálfbært vottuðum sjávarafurðum?

Which species are left? Which are sustainable? Who's sourcing responsibly?

Buying fish can be confusing. What constitutes sustainable seafood? It is not always clear which species are sustainable, or which businesses are responsibly sourcing their fish. It's no surprise that [making good purchasing choices](#) can be difficult.

But the challenges are not only at the fish counter – there are problems earlier in the supply chain as well. We only have information about the health of certain fish stocks. For many we have too little information to make assessments of their sustainability. Even those stocks in EU waters about which we do have data are not sufficiently protected: [more than half are overfished](#). Without better quality information it is hard to properly understand the environmental and economic impacts of harvesting any given fish species. Aquaculture (farmed fish) is becoming increasingly important to satisfy global demand, but growth in this sector has [problems of its own](#).

Why we joined...

"We are committed to responsibly sourcing our foods and reducing our impact on the environment. We share the visions and aims of the SSC and are proud to be a member of the coalition."
